## ITER 20

Polyalphaolefin bitumen membrane (PAO)

## DESCRIPTION

Prefabricated waterproofing membrane composed of distilled bitumen and polyalphaolefin polymers (PAO) reinforced with heavy duty, thermostabilised, non-woven spunbonded polyester fabric that gives the membrane high mechanical properties and good dimensional stability (0.3\%).

For polyolefin membranes without mineral self-protection consisting of slate, intended to be used as a top layer, always provide for periodic surface protection with protective reflective paint.
The particular formulation of the compound ensures high thermal resistance to the action of UV radiation.

## ADVANTAGES

$\checkmark$ High puncture strength
$\checkmark$ Resistance to demanding working situations
$\checkmark$ Excellent mechanical performance
$\checkmark$ High flexibility at low temperatures and creep even after aging
$\checkmark \quad$ The PP finish allows for immediate anti UV coating (not essential)
$\checkmark$ Monolayer use

Reinforcement: Non-woven spunbonded polyester fabric
Compound: Polyalphaolefin bitumen
Upper finish: Black PP
Lower finish: PE Film
Intended use: Upper layer / Underlayer/ Heavy duty lower protection / Foundations / Monolayer
Application method: Blowtorch / Glue / Hot air / Mechanical fixing

## TECHNICAL SPECIFICATIONS

| CHARACTERISTICS | TESTING METHOD | M.U. | TOLERANCE | VALUE |
| :---: | :---: | :---: | :---: | :---: |
| Thickness | EN 1849-1 | mm | MDV - 0.2 mm | 4 |
| Maximum tensile strength (L/T) | EN 12311-1 | $\mathrm{N} / 50 \mathrm{~mm}$ | MDV - 20\% | 850/650 |
| Flexibility at low temperature | EN 1109 | ${ }^{\circ} \mathrm{C}$ | MLV | -20 |
| Creep | EN 1296/1110 | ${ }^{\circ} \mathrm{C}$ | MDV - $10^{\circ} \mathrm{C}$ | 140 |
| Load resistance | EN 12730 | Kg | MLV | 20 |

PACKAGING

| PRODUCT | ROLL SIZE | WEIGHT <br> $\mathrm{Kg} / \mathrm{m}^{2}$ | THICKNESS <br> MM | SQUARE METRES <br> PER PALLET | EN |
